

Gen-over-gen DRAM technology leadership

Micron continues to lead the industry, advancing from 1 α (1-alpha) and 1 β (1-beta) to 1 γ (1-gamma) technology

(1) 1z is the previous version of DRAM technology before 1 α . (2) Based on calculations comparing 24Gb density DDR5. (3) Based on calculations comparing 16Gb density DDR5. (4) Calculated based on overall bits per wafer comparing 1 β and 1 γ process.
